# Course Overview

# Overview React/React Native

# Setup Environment for React Native

Webstorm, Visual Studio Code,  
Atom, Sublime, VIM, etc...

What is IDE?

XCODE

ANDROID STUDIO

Develop native code + Package app  
and run app on the Simulator

HOME BREW

HomeBrew

Used to install node

NODE

NPM

Node run javascript out of browser  
NPM package manager for Nodejs

WATCHMAN

Watch changed files on hard disk

RN CLI/EXPO CLI

Used to generate React Native  
project & run app on Simulator

# What is IDE?

Webstorm

Visual Studio Code

Atom

Sublime

VIM

# Setup Environment for Flutter

IntelliJ, Android Studio, Visual  
Sublime, VIM, etc...

What is IDE?

XCODE

ANDROID STUDIO

Develop native code + Package app  
and run app on the Simulator

## FLUTTER PLUGIN

Flutter Plugin

## FLUTTER SDK

Used to generate Flutter project &  
run app on Simulator

<https://flutter.dev/docs/get-started/editor>

# Installation Guide

## ❑ 1. Install IDE

- Webstorm, Visual Studio Code, Atom, Sublime, Vim, etc...

## ❑ 2. Install Xcode, Android Studio

- Install Xcode from **Appstore**
- Install Android Studio
  - JDK: <https://www.oracle.com/java/technologies/javase-jdk14-downloads.html>
  - Android Studio: <https://developer.android.com/studio>

## ❑ 3. Install Homebrew (<https://brew.sh/>)

- Open **Terminal**

```
/bin/bash -c "$(curl -fsSL https://raw.githubusercontent.com/Homebrew/install/master/install.sh)"
```

# Installation Guide

## ❑ 4. Node & NPM (<https://nodejs.org/en/>)

- Open Terminal

```
$ brew install node
```

## ❑ 5. watchman (<https://facebook.github.io/watchman/>)

- Open Terminal

```
$ brew install watchman
```

## ❑ 6. RN CLI/Expo CLI

```
$ npm install -g react-native-cli
```

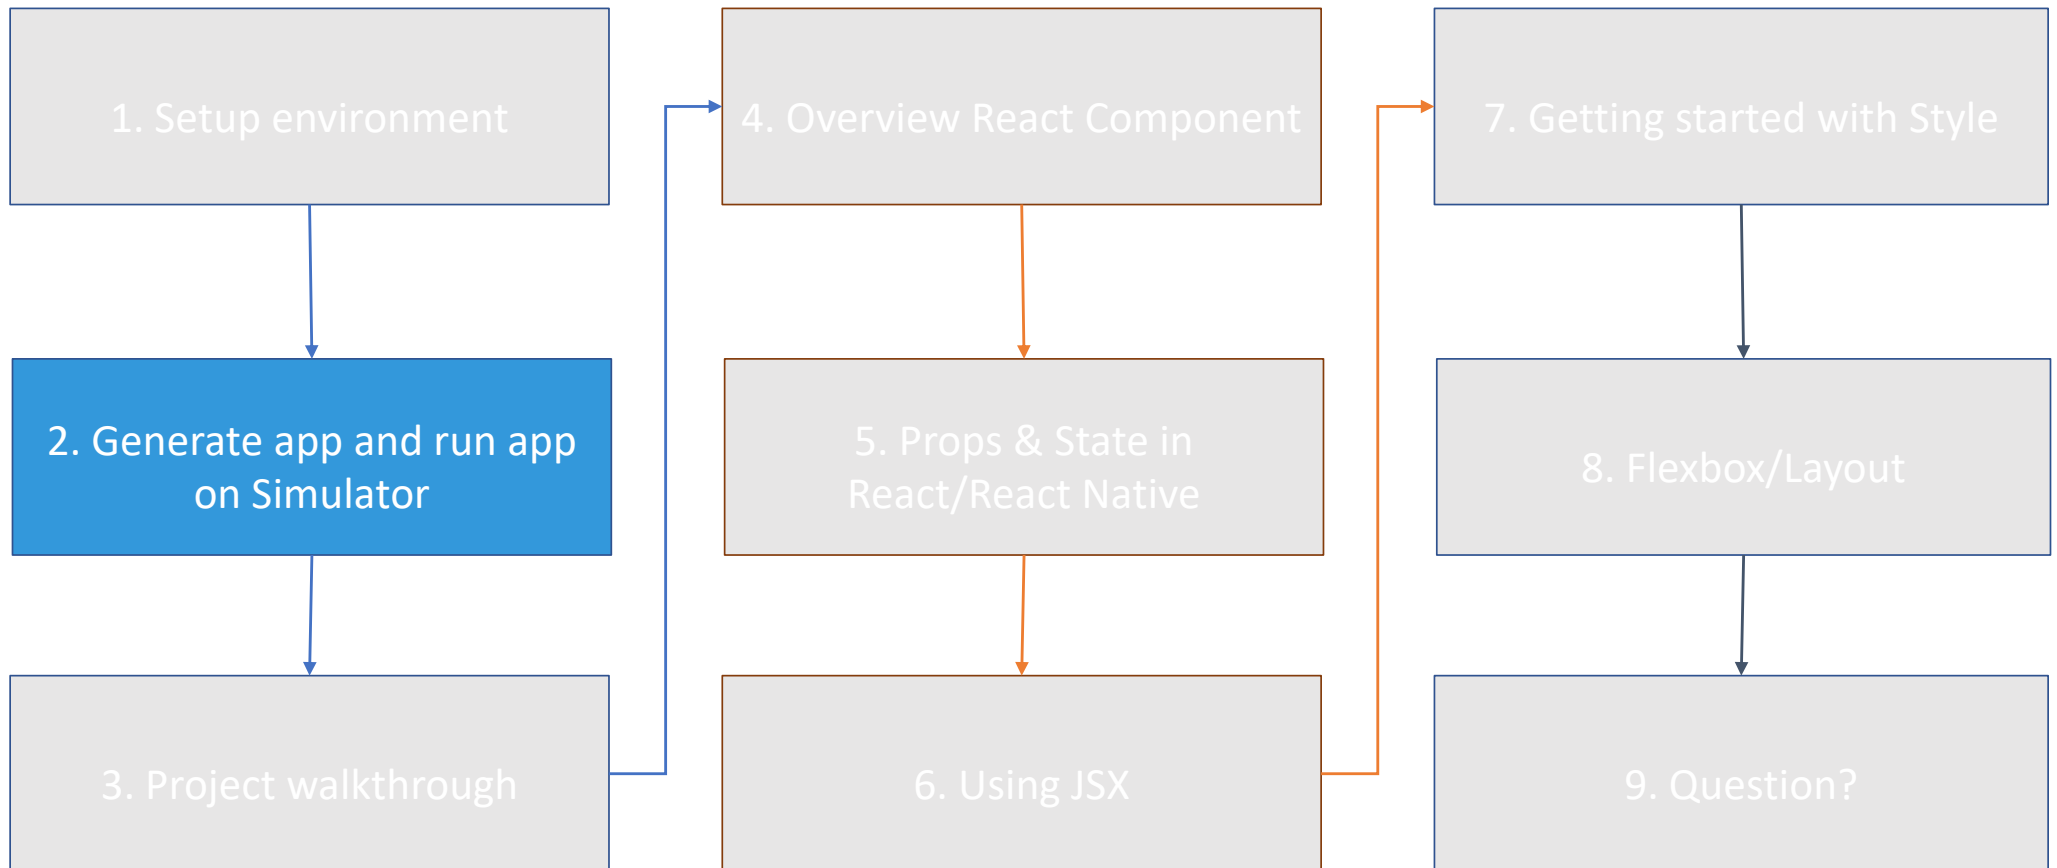

```
$ npm install -g expo-cli
```

RN CLI: <https://github.com/react-native-community/cli>

Expo CLI: <https://expo.io/>

# Overview React/React Native

# Generate React Native Project

- Generate a React Native project with RN CLI/EXPO CLI

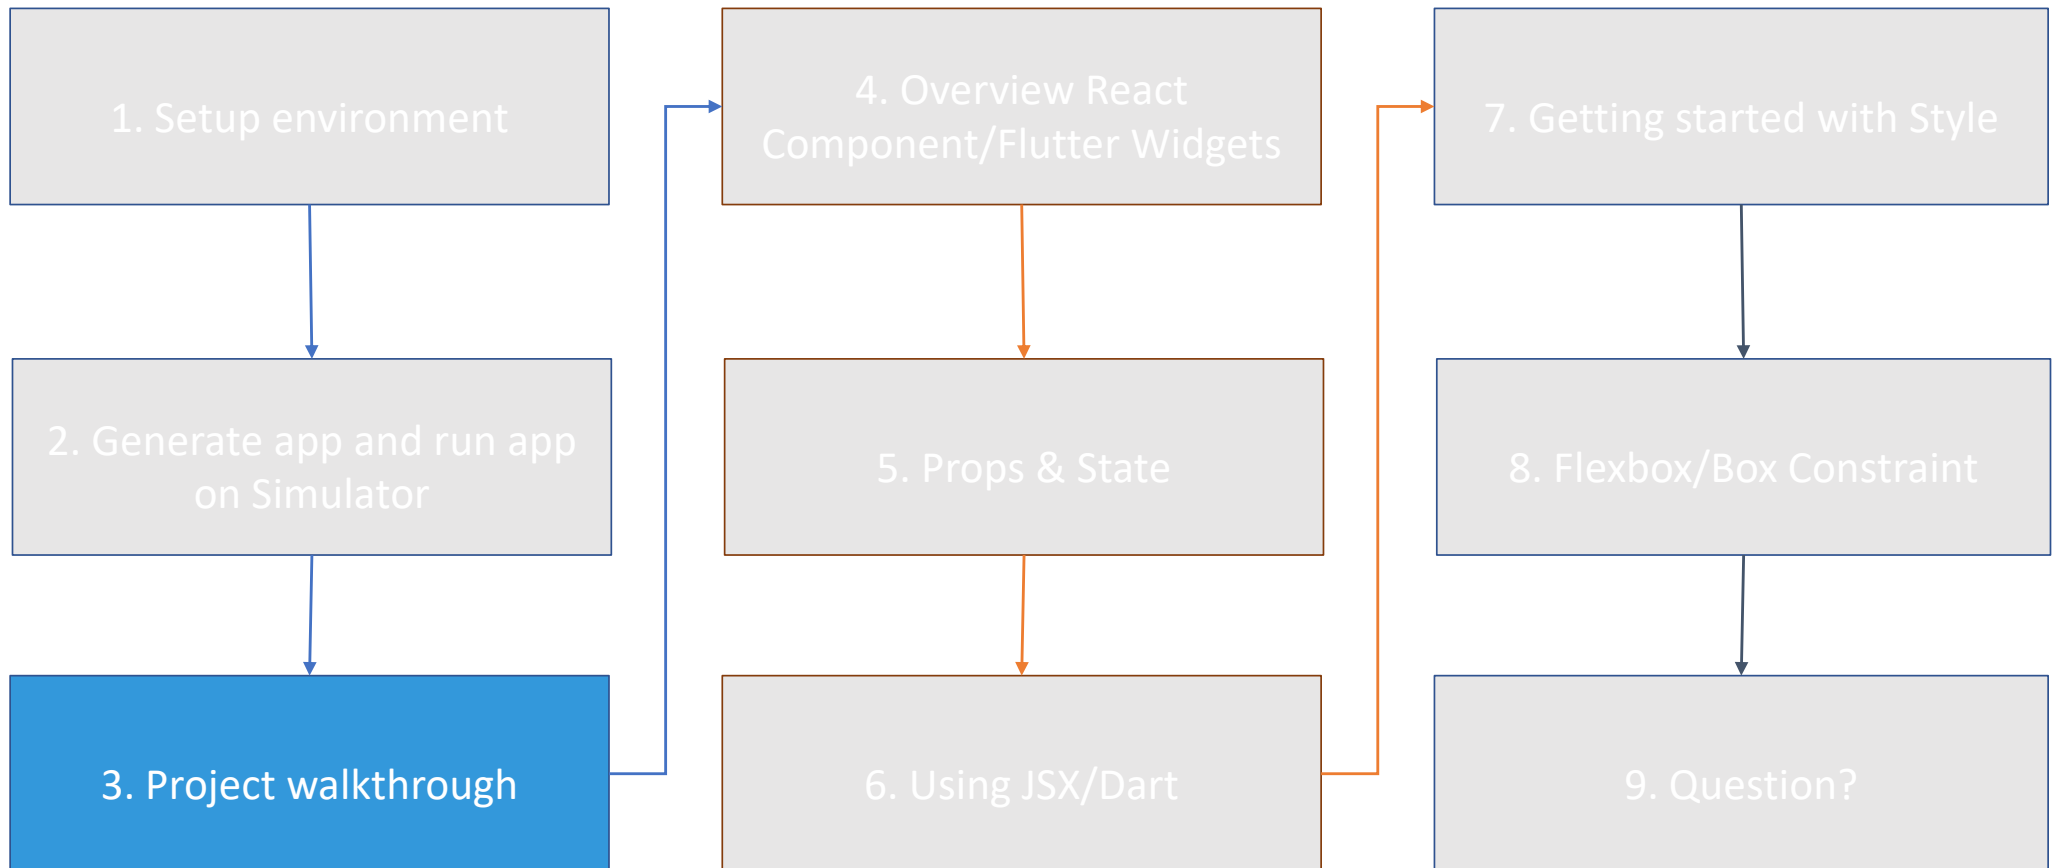

```
react-native init project-name
```

```
expo init project-name
```

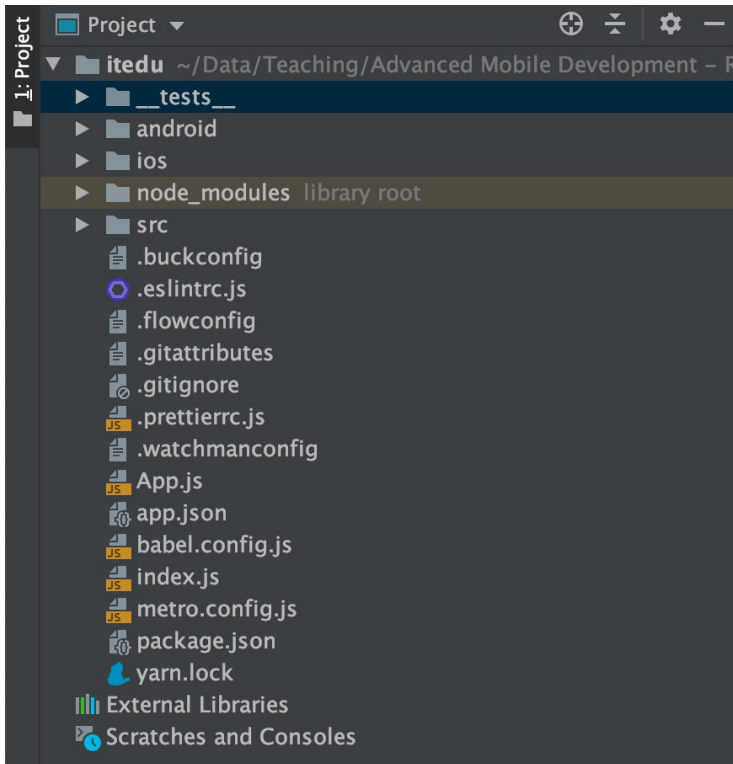

- Run app on Simulator
  - Xcode & Android Studio
  - Command line

```
react-native run-ios  
react-native run-android
```

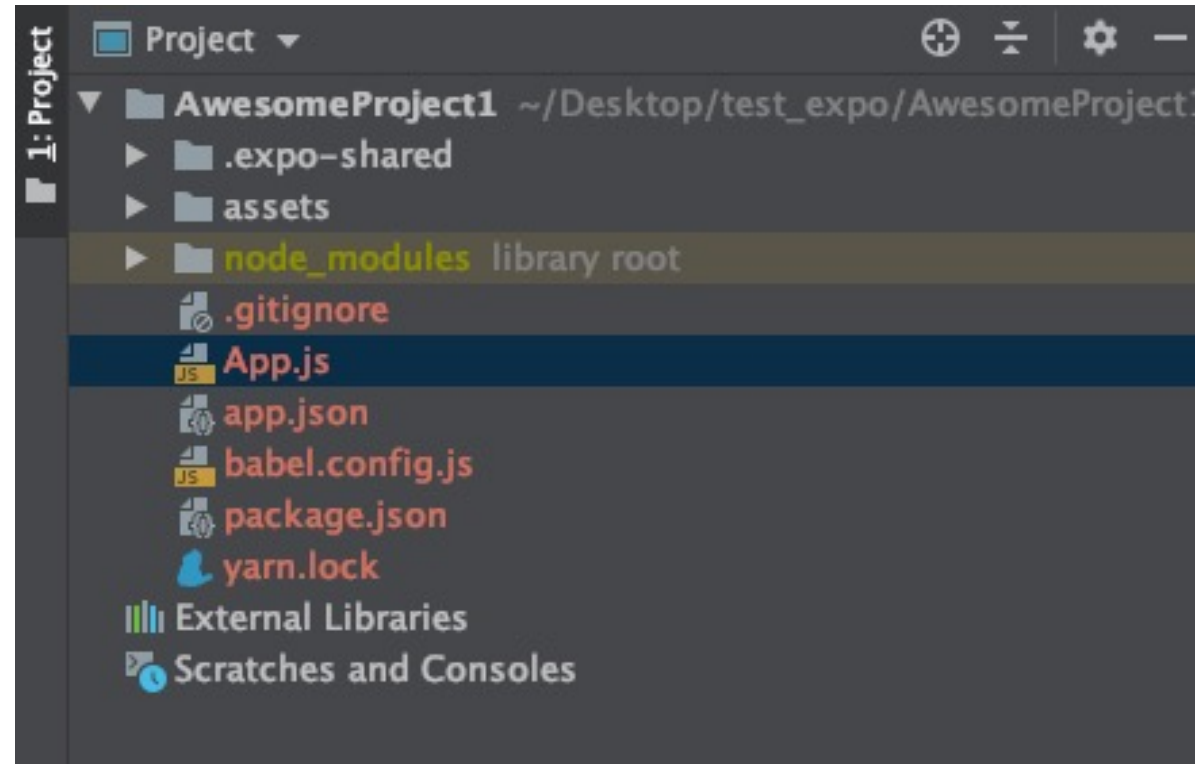

# Overview React/React Native

# Project Walkthrough

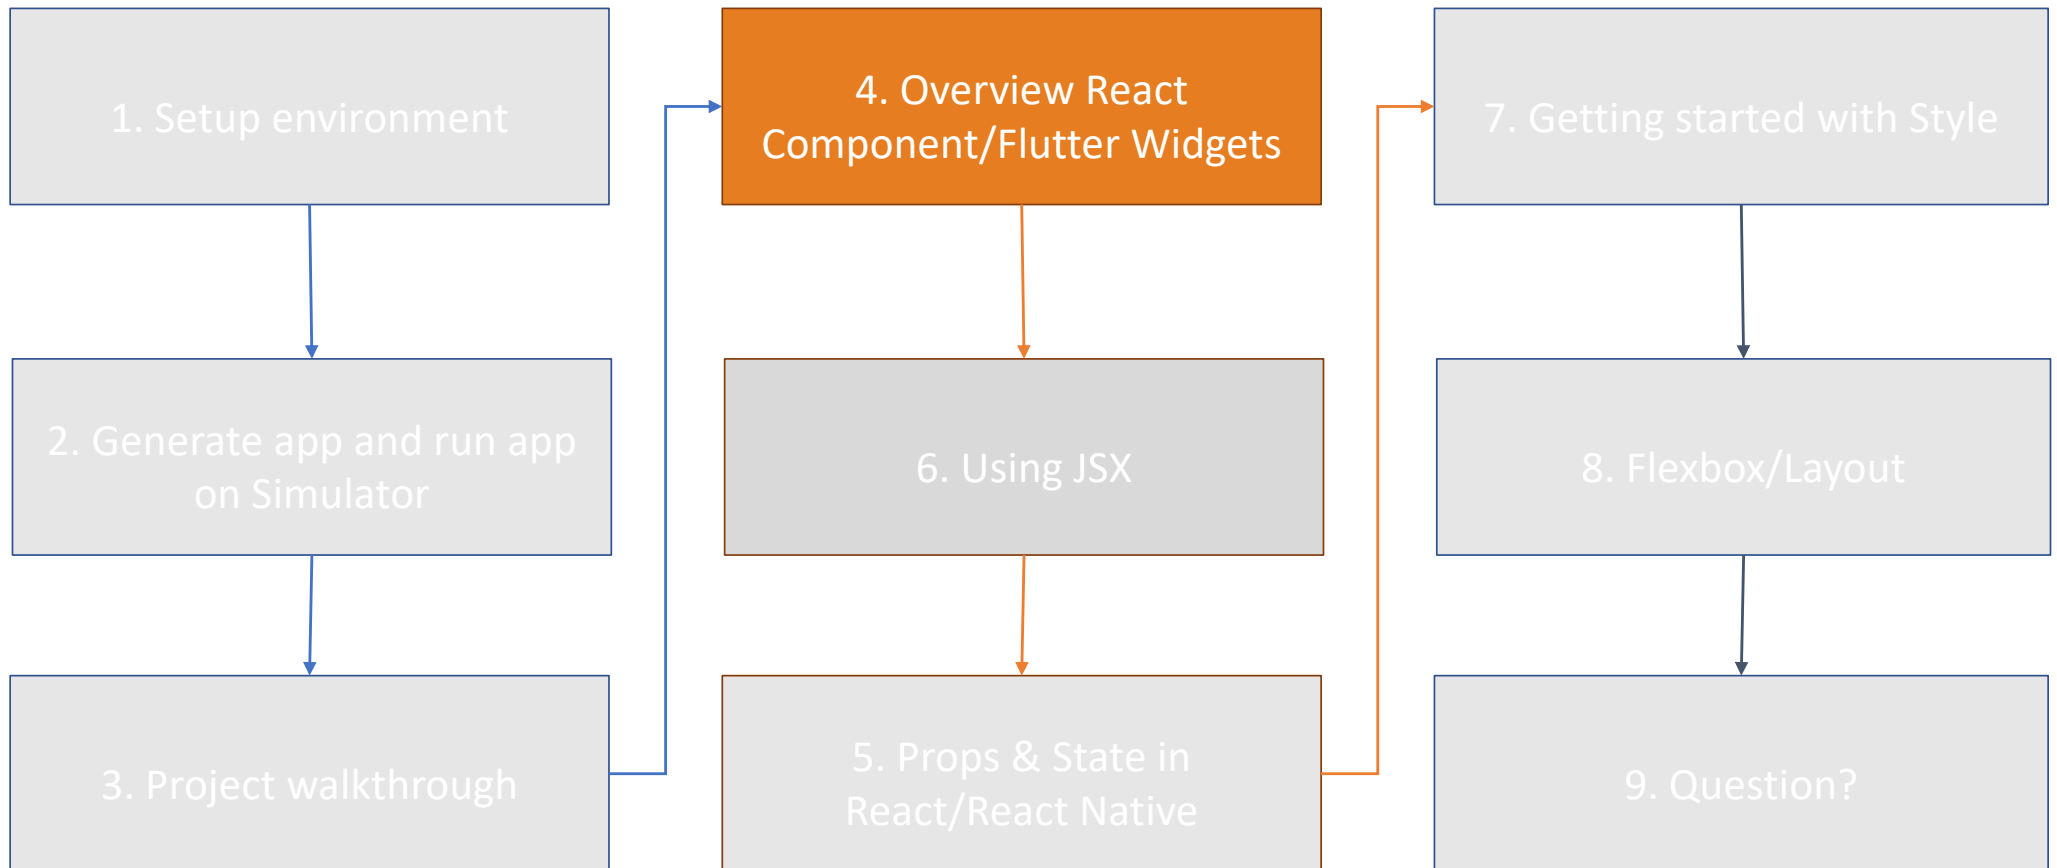

REACT-NATIVE CLI

EXPO CLI

# Overview React/React Native

# Overview React Component

## ❑ What is components?

- <https://reactjs.org/docs/components-and-props.html>

↑  
*That's a lot of COMPONENTS!*

# Using JSX

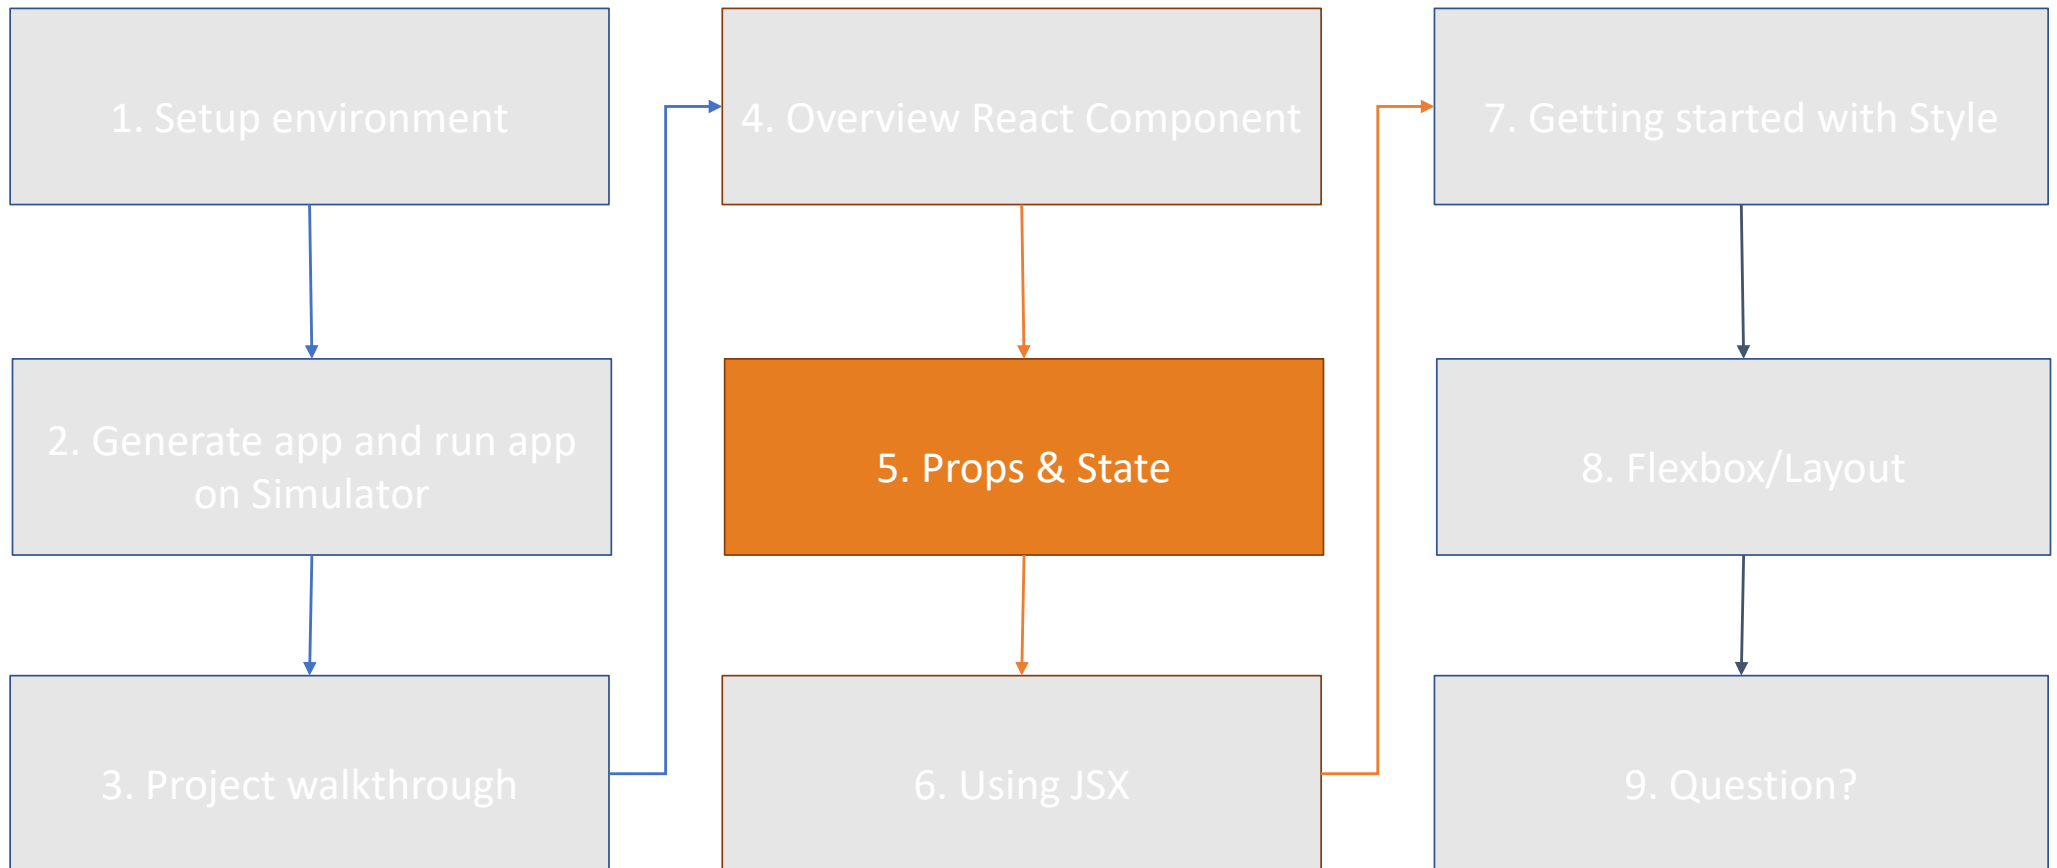

## □ Introduction to JSX

- <https://reactjs.org/docs/introducing-jsx.html>

## □ Rules with JSX

- We can assemble different JSX elements like normal HTML
- We can prefer to JS variable inside of a JSX block by using curly braces
- We can assign JSX element to variable, then show the variable in a JSX block.

# Overview React/React Native

# Props & State

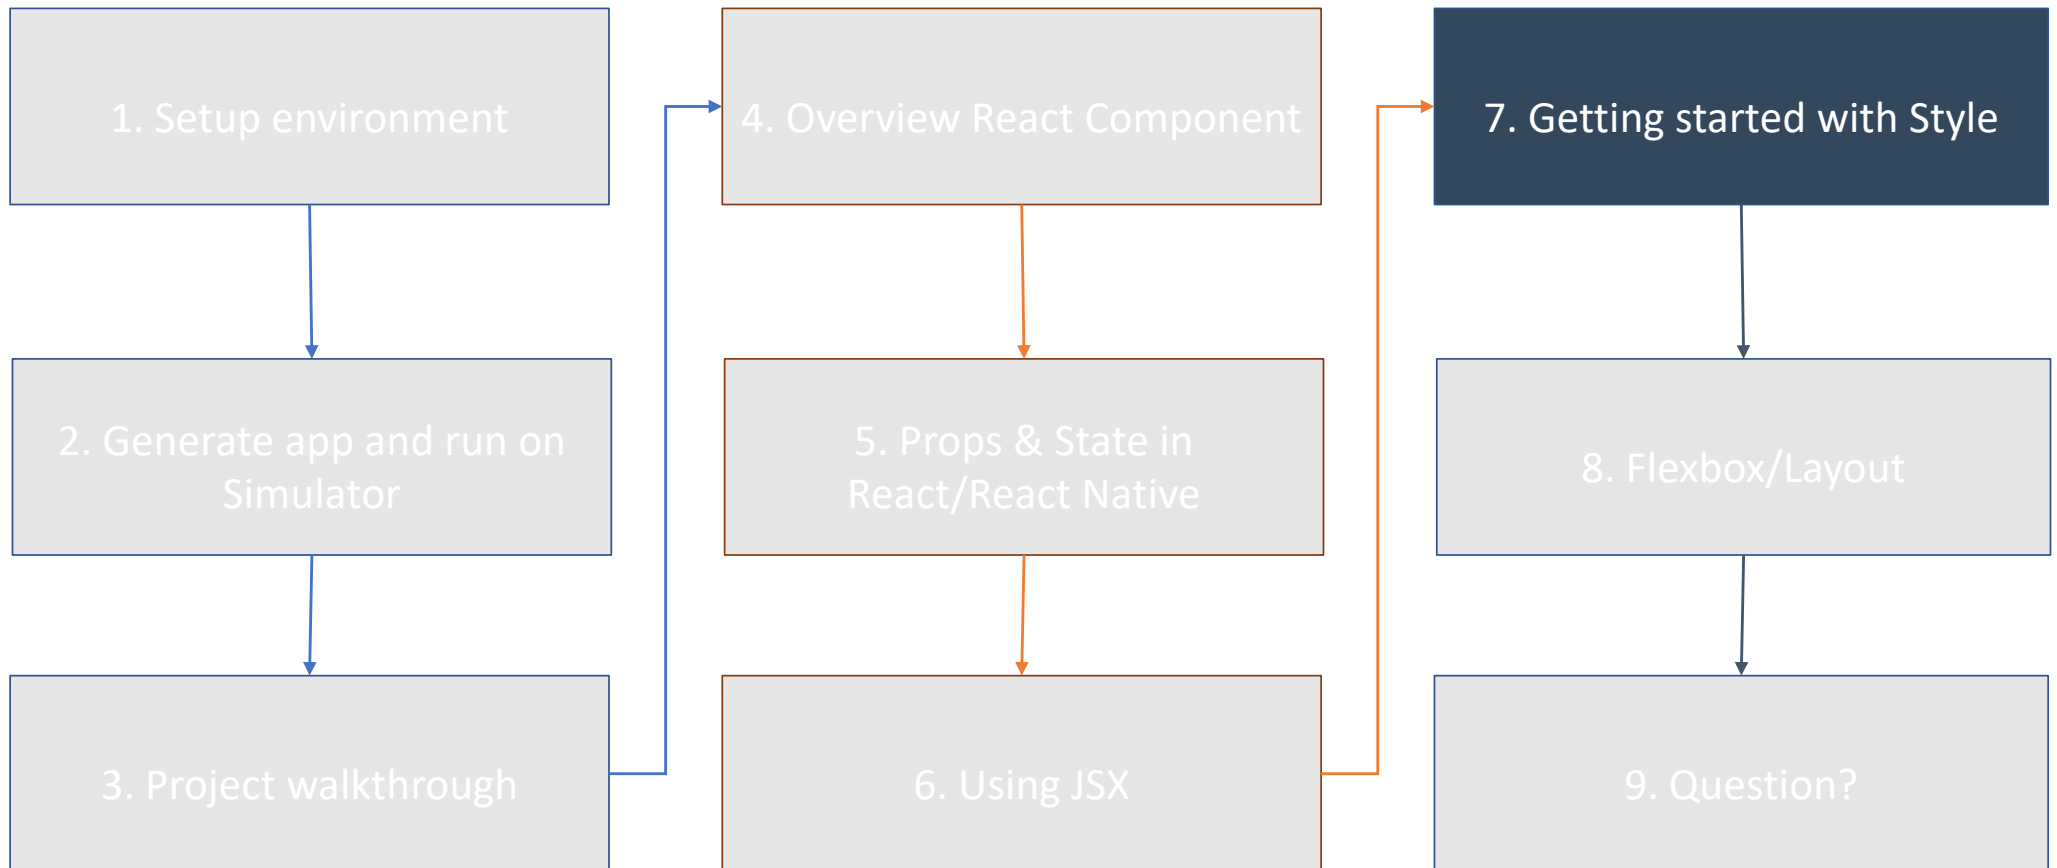

## □ React fundamentals:

- <https://reactjs.org/docs/components-and-props.html>
- <https://reactjs.org/docs/state-and-lifecycle.html>

## □ What is the difference between Props & State?

- Props
  - Immutable/Read-only
  - Passed data from Parent to Child
- State
  - Mutable
  - Owned & managed by Component

# Overview React/React Native

# Getting started with Style

- ❑ Style with React Native
  - <https://reactnative.dev/docs/style>
- ❑ Dimensions in React Native
  - Fixed Dimensions
  - Flex Dimensions
  - Percentage Dimensions

# Getting started with Style

## ❑ Fixed dimensions

```
1 import React, { Component } from 'react';
2 import { AppRegistry, View } from 'react-native';
3
4 export default class FixedDimensionsBasics extends Component {
5   render() {
6     return (
7       <View>
8         <View style={{width: 50, height: 50, backgroundColor: 'powderblue'}} />
9         <View style={{width: 100, height: 100, backgroundColor: 'skyblue'}} />
10        <View style={{width: 150, height: 150, backgroundColor: 'steelblue'}} />
11      </View>
12    );
13  }
14 }
15
16 // skip this line if using Create React Native App
17 AppRegistry.registerComponent('AwesomeProject', () => FixedDimensionsBasics);
18
```

No Errors

Show Details

# Getting started with Style

## Flex dimensions

```
3
4 export default class FlexDimensionsBasics extends Component {
5   render() {
6     return (
7       // Try removing the `flex: 1` on the parent View.
8       // The parent will not have dimensions, so the children can't expand.
9       // What if you add `height: 300` instead of `flex: 1`?
10      <View style={{flex: 1}}>
11        <View style={{flex: 1, backgroundColor: 'powderblue'}} />
12        <View style={{flex: 2, backgroundColor: 'skyblue'}} />
13        <View style={{flex: 3, backgroundColor: 'steelblue'}} />
14      </View>
15    );
16  }
17 }
18
19 // skip this line if using Create React Native App
20 AppRegistry.registerComponent('AwesomeProject', () => FlexDimensionsBasics);
21
```

No Errors

Show Details

# Component Structure

Import libraries which we need to create a component

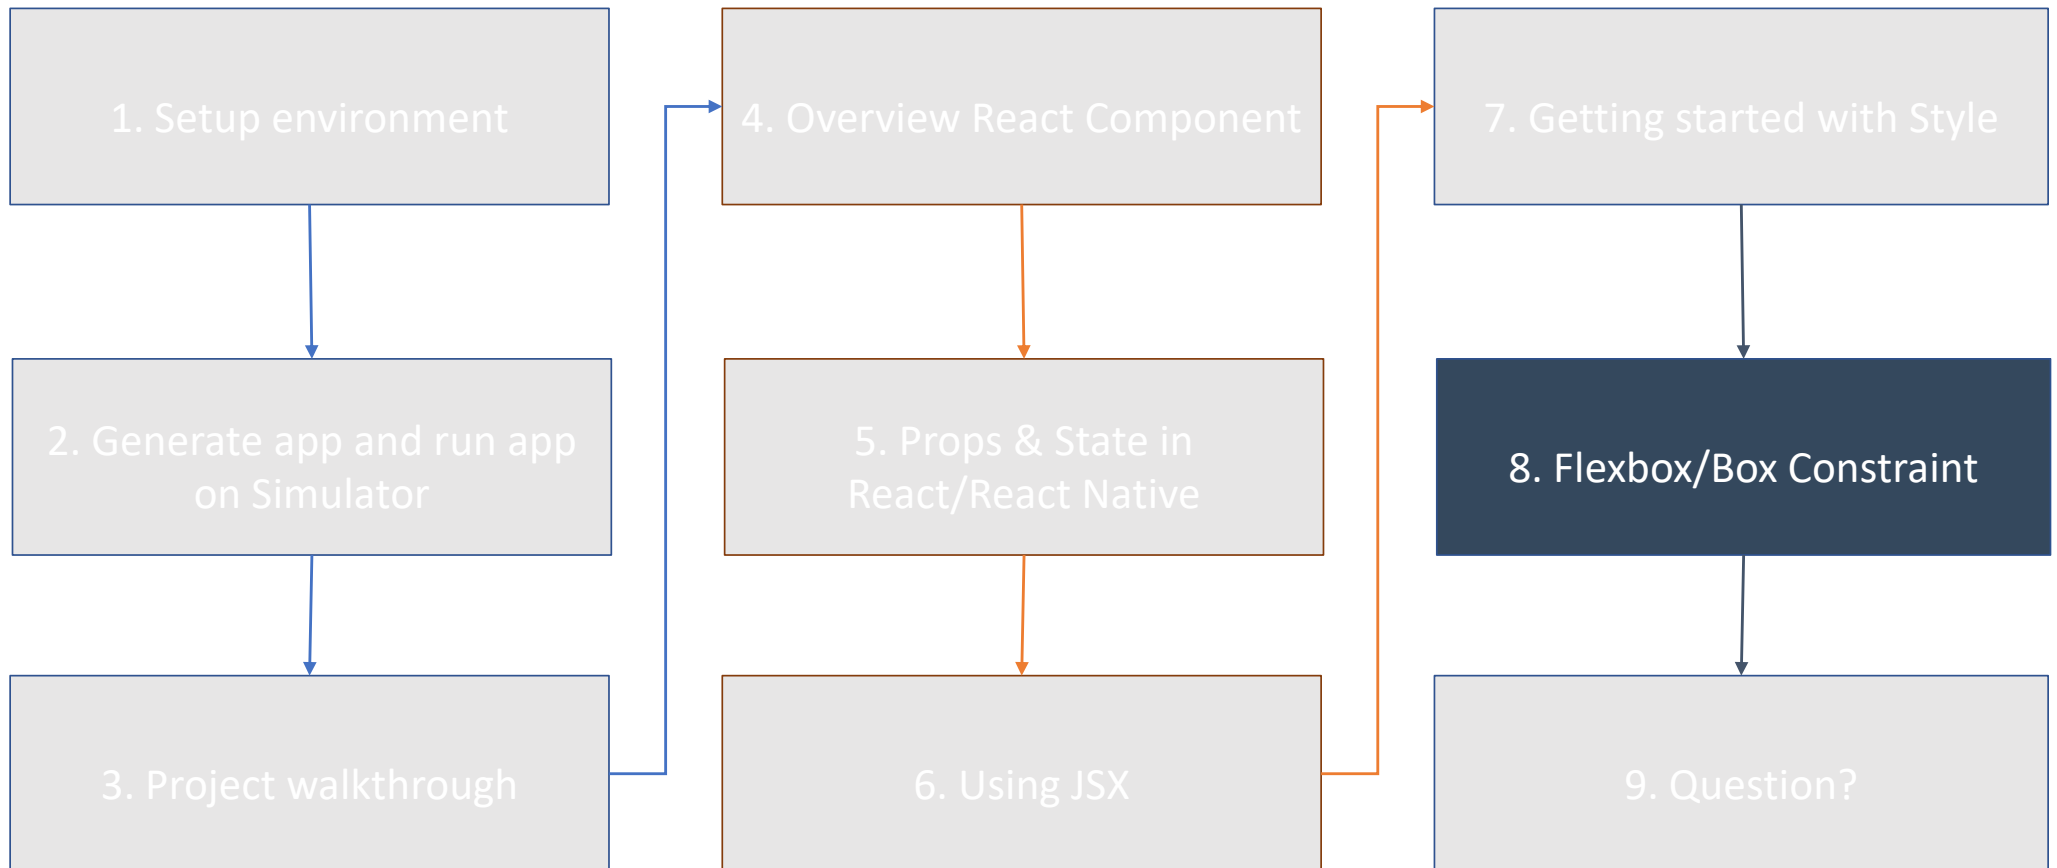

Create a component - a function which returns JSX

Create a stylesheet to style our component

Export the component so we can use it elsewhere in our project

```
hello-function-component.js
1  import React from 'react';
2  import {View, StyleSheet, Text, Button} from 'react-native';
3
4  const HelloFunctionComponent = (props) => {
5    const onPressGreeting = () => {};
6
7    return (
8      <View>
9        <Text style={styles.textStyle}>Hello {props.name}</Text>
10       <Button onPress={onPressGreeting} title="Greeting" />
11     </View>
12   );
13 };
14
15 const styles = StyleSheet.create({
16   textStyle: {
17     fontSize: 20,
18     color: 'red',
19   },
20 });
21
22 export default HelloFunctionComponent;
```

# Overview React/React Native

# Flexbox & Layout

## Layout with Flexbox
